Brainstorming & Idea Prioritization Template

Date	03 July 2026
Team ID	N/A
Project Name	OptiCrop – Smart Agricultural Production Optimization Engine
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1		Build an ML model that recommends the best crop from N, P, K, temperature, humidity, pH, and rainfall.	Core ML feature	1
2		Create a Flask web app with a simple form for farmers to enter soil/climate data.	Application/UI	2
3		Group crops by season (summer/winter/rainy) to give season-aware recommendations.	Data feature	1
4		Compare multiple algorithms (KNN, Logistic Regression, Decision Tree, Random Forest) and pick the best.	Core ML feature	1
5		Add a dashboard for researchers/policymakers to view regional crop-suitability trends.	Future scope	3
6		Integrate IoT soil sensors for automatic real-time data input instead of manual entry.	Future scope	3

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	ML-based crop recommendation engine (multi-algorithm comparison + seasonal grouping)	High	High	1	Yes
2	Flask web application with soil/climate input form and instant prediction	High	High	2	Yes

3	IoT sensor integration and researcher/policymaker dashboard	Low	Medium	3	No (future scope)
