Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "Farmers keep planting crops unsuited to the soil and rainfall we're seeing this year." • "We need consistent, data-backed guidance we can give to farmers across regions." • "Manually assessing soil reports for every district doesn't scale."	THINKS • "Could a machine learning model make consistent recommendations across different agro-climatic zones?" • "Is the underlying data reliable enough for policy decisions?" • "How do we turn this into something extension officers can actually use?"
DOES • Reviews soil nutrient and climate reports from multiple regions. • Analyzes crop yield and environmental datasets for patterns. • Evaluates and pilots recommendation tools before rolling them out.	FEELS • Cautiously optimistic about AI improving farmer outcomes. • Concerned about data quality, bias, and regional variation. • Motivated by the potential impact on food security and farmer income.

Persona: Agricultural Researcher / Policymaker (role / user type)
