Data Flow Diagram

The diagram below shows how data moves through OptiCrop — from the farmer entering soil/climate values, through validation and prediction, to the model store and back to the user as a crop recommendation, with prediction records optionally feeding aggregated trend reports to researchers/policymakers.

Symbol	Name	Description
Oval / Rounded shape	External Entity	A person or system outside OptiCrop that sends or receives data (e.g., Farmer, Researcher/Policy maker).
Rectangle with numbered header	Process	An activity that transforms incoming data into outgoing data (e.g., Input Handling, Prediction, Result Display).
Rectangle (solid fill, no number)	Data Store	A place where data is held for later use (e.g., Model Store, Prediction Records).
Labeled arrow	Data Flow	The movement of data between entities, processes, and data stores, labeled with what data is passed.
